

Project Creation and Template Import

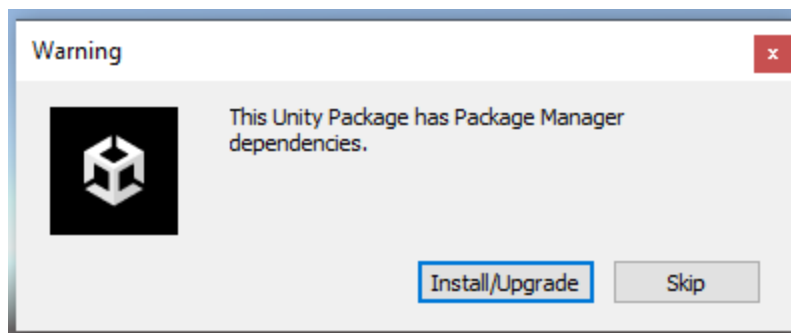

- **Recommended Unity Version:** For a smooth experience, it is recommended to use Unity **2022.3.21f1**.
- **Install Unity Hub:** Download and install Unity Hub from [Unity's official website](#). Use it to manage Unity versions and projects easily.
- **Start with Built-In Renderer:** Open or create a project using the **Built-in Render Pipeline** for simplicity and compatibility.

- You can remove the **Scenes** folder generated by default.
- Import template:
 1. You can use **Asset Store** (if you bought there)
 2. Or manually add the package: click `Assets > Import Package > Custom Package`
- Import template settings by clicking the **"Import"** button.

- Click the **"Install/Upgrade"** button to install dependencies.

- Open `Project Files\Scenes\` scene to run the game.
- Build the game.
